

## Tembo TMX Testing SOP

---

Tembo TMX Rebars is sold in bundles of TMT with their batch numbers clearly mentioned in the tags attached to each bundle.

From any batch, you may pick any bar.

Kindly Note down the batch number of the TMT, clearly mentioned on the Tags

Kindly cut it into 6 pieces of One Meter each that can be sent to UNBS and any other testing facility around the globe.

The Scanner in our tags will take you to our online page with our Chemical and Mechanical Values of each day and batch number.

You can now verify the online values to the test results from UNBS and/or any other testing facility of your choice.

Kindly keep one or two pieces of the same rebar at your premises and also to provide Tembo with One to be able to test and reverify the value in case of any deviations for complete transparency.

If any Rebar is found substandard, Tembo will re-test our TMX rebars of the same piece of the TMT provided by you to re-verify.

Our testing can be done in your presence, you may bring the piece you have at your premises to ensure we are using the same TMT piece tested by you.

After testing both pieces, if proven, Tembo guarantees to send a brand-new batch in replacement.
